

Installation Instructions for Exterior Application

1. Before installing the product, ensure you have the product on-hand to assist you with taking exact measurements.
2. Locate and mark area where product is to be installed. Product must be fastened to material such as plywood, studs, or concrete wall to ensure enough support for fastening and bonding to the product.
3. Pre-drill product before installing to minimize cracking when fastening. If cracking occurs, patch with exterior gypsum cement or concrete patch.
4. Fasten product with coated nails, screws, toggle bolts, or wall ties. Use exterior bonding agent (adhesive) on the back of the product. Fastening system needs to be proportionate to weight and size of the product.
5. All products manufactured for exterior use must be treated or coated to protect against the elements. We recommend treating all areas of the product with several coats of boiled linseed oil, exterior base paint, concrete sealer, or other like material before and after installation.

**User shall determine and assume full responsibility for the suitability and installation of the product.*
