

Tips and Techniques for All Products

1. When installing any product, always:
 - Check building codes for local requirements.
 - Have product on hand for exact measurement before installation.
2. Before cutting into any structure, check for electrical wiring, plumbing, supports, and load bearing areas, etc.
3. When installing Cast Designs products:
 - Counter sink coated fasteners into product 1/8" or less
 - Fill holes with plaster patch or non-shrinking spackling.
 - Use feathering techniques to blend in with design.
4. When attaching Cast Designs products, use adhesive such as Liquid Nails or drywall board adhesive to ensure complete bonding to the ceiling or wall.
5. If finished wall areas are not even with surface of product, use painter caulk to fill uneven gaps.
6. Cast Designs products accept finish well. Prime and paint; seal, stain, and varnish; or faux finish. For ease of installation, we recommend applying finish to product first, then touching up as needed.
